¹ The Unified State Exam is an exam in the Russian Federation. It is in fact a series of exams every student must pass after graduation from school to enter a university or a professional college.

SUMMARY OF THE PROGRAMME

The educational programme «Social Work» is implemented in the field of studies "Sociology and Social Work" by the Department of Theory and Practice of Social Work of St. Petersburg State University and leads to the award of the qualification (degree) "Bachelor of Social Work" degree. The programme is managed by Ph.D. in Sociological Sciences, Associate Professor of the Department of Theory and Practice of Social Work Smirnova Anna.

Place of the implementation – St. Petersburg, st. Smolny d 1/3 9th entrance;

Training period – 4 years;

Form of education – Full-time,

Credits – 240.

Start of the implementation of the programme is 2008

The number of academic hours in one credit (36 hours in one credit) meets the requirements of the university's regulatory documents.

The programme corresponds to the 6 level of the National (NQF)/European (EQF) qualification framework.

The programme is implemented in accordance with the following regulatory document(s):

1. The Federal Law of the Russian Federation of December 29, 2012 No. 273. «On Education in the Russian Federation».

2. Federal State Educational Standard of Higher Education approved by the Order of the Ministry of Science and Higher Education of the Russian Federation on February 5, 2018 No.76 of in the field of study "Social work" (bachelor's degree).

3. St. Petersburg State University Higher Education Standard, approved by Order No. 7828/1 dated August 9, 2018.

4. Professional standard "Specialist in social work", approved by the Order of the Ministry of Labor and Social Protection of the Russian Federation of June 18, 2020 No. 351n (registered with the Ministry of Justice of Russia on July 15, 2020 N 58959).

5. The professional standard "Head of the social services organization", approved by the Order of the Ministry of Labor and Social Protection of the Russian Federation of June 18, 2020 No. 353n (registered by the Ministry of Justice of the Russian Federation on July 15, 2020 No. 58960).

6. Professional standard "Specialist in minors custody and guardianship organization", approved by Order of the Ministry of Labor and Social Protection of the Russian Federation of November 18, 2013 No. 680n (registered by the Ministry of Justice of the Russian Federation on December 26, 2013 No. 30850).

7. Professional standard "Specialist in rehabilitation work in the social sphere", approved by the Order of the Ministry of Labor and Social Protection of the Russian Federation of June 18, 2020 No. 352n (registered by the Ministry of Justice of the Russian Federation on July 20, 2020, registration No. 59010).

8. The professional standard "Specialist in working with families", approved by the Order of the Ministry of Labor and Social Protection of the Russian Federation of November 18,

2013 No. 683n (registered by the Ministry of Justice of the Russian Federation on December 26, 2013, registration No. 30849).

The University has a perpetual license to conduct educational activities (<https://spbu.ru/sites/default/files/licenziya.pdf>) and state accreditation (https://spbu.ru/sites/default/files/svidetelstvo_o_gosudarstvennoy_akkreditacii.pdf) for a period of for 6 years/years..

At the time of accreditation, 64 persons pursue the analyzed programme.

On budgetary provisions	On a paid basis	On employers-sponsored basis
57	7	

Online visit was carried out within the external assessment of the programme during the period from September 26 to September 27, 2022.

Strength of the programme

1. High level of teaching staff: 36% of the teaching staff have a doctorate degree in their specialty, 45% have a Ph.D. degree, actively participate in research activities (including with the involvement of students), represent the interests of St Petersburg University at international and all-Russian conferences , for example: International Conference of St. Petersburg State University, December 24, 2020 (all teachers of the department), Interuniversity International Congress (Moscow, January 20, 2022), IV World Sociological Forum (IV ISA Forum of Sociology) (February 23-28, 2021, Porto Alegre, Brazil online. (Borodkina O.I.).

2. Participation of programme students in social research, for example: the Russian-German Center for Social Sciences, the International Center for Social Research, the Russian-Chinese Center for Comparative Social, Economic and Political Research, the Resource Center for Sociological and Internet Research.

3. Involvement of stakeholders in the design of the analyzed programme. Employers are involved in the implementation of the educational program, the development of evaluation tools repository, and the practical training of students. Students are also involved in the design and implementation of the educational program (through the participation of representatives of the student council in the Study Methodical Commission , the Academic Council of the faculty , the Academic Council of St. Petersburg State University , through student applications submitted through a virtual reception; regular monitoring of students' opinions is also carried out using surveys of students of St. Petersburg State University).

4. St Petersburg University has an established education quality management system in place, and professional-public and international accreditation of programmes is regularly carried out, including in the field of Social Work. International accreditation for the "Social work" field of study is an innovation for the system of social education, initiated by St. Petersburg State University.

5. Undoubtedly, the strength is the possibility of implementing fundamental training with the involvement of teachers from specialized sociological departments. High-quality fundamental training increases the educational opportunities of students, allows them to more actively and deeply engage in self-education, expand their professional competencies, as well as to better implement programs for cooperation between governmental departments in the social assistance and protection of citizens sphere, enhances such sought-after competencies of graduates as diagnosing and identifying the needs of citizens in social protection and social services, development of programs and projects for solving social problems of individual groups of the population, designing forecasting and modeling projects for solving social problems, as well as the development and application of effective technologies and methods of working with risk groups.

6. One of the innovations that strengthens the training of students in the field of "Social Work" at St Petersburg University is the "Social Clinic". This is a unique experience that needs to be studied and replicated.

7. Compared to the previous period (assessment of 2018), the functions of career consulting have expanded, which is especially significant for the "Social Work" training area.

8. The university maintains a high supply of material, technical and financial resources, information resources, and student services.

Weaknesses of the programme

1. In the self-evaluation documents, there is an indication of 83 contracts concluded for the practice (internship) of students. All syllabi of programme professional disciplines (100%) are developed with the participation of employers, but the level of satisfaction with the work of graduates is 80%. This is undoubtedly a very high figure, but only 68% of employers believe that the competencies of program graduates meet the requirements for modern industry professionals, and 24% suggest that these competencies partially meet the requirements for modern industry professionals. The data are given in accordance with the Self-evaluation report. The results of the online visit confirm the conclusions of the Self-evaluation report.

2. One of the sides of this problem was the low involvement of employers in the resource support of the educational process.

3. An analysis of the information support of the educational process shows that the issues of students' practice in the field of "Social work" (bachelor's degree) are also not sufficiently covered.

4. The assessment of the quality of teaching staff work is focused on academic achievements, including publications in scientific journals, presence in scientometric databases, including foreign ones (Scopus , Web of Science Core collection). This indicator in modern conditions needs to be corrected.

5. In the teaching staff assessment system there is a lack of indicators that assess the involvement of teaching staff in solving practical and practice-oriented problems together with employers (participation in research on the instructions of employers, in joint events - practice-

oriented conferences, practical round tables, in discussing topical problems of practical social services and social protection).

These problems are not specific to St Petersburg State University. They require the attention of all universities that have such programmes.

Recommendations

1. It is recommended to establish feedback with employers to clarify and expand internship programs, to involve students in the activities of social service organizations. Perhaps, it is necessary to discuss the possibilities of involving students in monitoring the assessment (independent assessment) of the social services quality, the development and implementation of cultural and leisure programs for different groups of social service recipients, in particular, in active longevity programs, etc.

2. Participation in student All-Russian competitive events, such as the annual All-Russian student championship “I am a Professional” in the “Social Work” competence or the annual All-Russian Student Olympiad in the field “Social Work”, can contribute to the increase in the practice-oriented nature of the educational process. The tasks of the Olympiads are practice-oriented, the preparation of students for participation in these championships and olympiads will help in orienting the educational process towards solving practical problems.

3. In the educational process, the level of involvement of employers in the implementation of the educational program is high. However, they act as lecturers who lead the same classes as other teachers of the department. It is advisable to involve employers to a greater extent for conducting trainings, business games and other practice-oriented forms of classes within the framework of the disciplines. The number of trainings and the frequency of conducting depends on the themes of the disciplines.

4. With regard to the teaching staff, it is possible to strengthen the motivation (incentives) of those teachers who are involved in direct contacts with employers, in conducting research on the instructions of employers, developing social projects to solve practical problems, who organize practical round tables, participate in the discussion of important problems of practical social service and social protection, in the creation of permanent discussion platforms to discuss important practical tasks of the system of social services and social protection of the population. For example, this can be done by allocating personal grants for such work.

5. Greater opportunities can be associated with the provision of internship opportunities not only for bachelor degree students, but also for teachers in social service organizations, including socially-oriented non-profit organizations that have more opportunities to attract students and teachers to solve their current practical problems. Such events will make it possible to receive feedback from employers more quickly, to include questions focused on solving practical problems in the educational process.

Assessment profile of the learning outcomes and education quality assurance

No	Criterion	Assessment

	8.	Management of Human Resources, Material, Technical and Financial Resources of the Programme	<i>Excellent</i>
	9.	Student Services	<i>Excellent</i>
10.	Interaction with Applicants	<i>Excellent</i>	

² Hereafter Good means meets the criteria

³ Hereafter Excellent means fully meets the criteria

Assessment profile of the learning outcomes and education quality assurance

QUALITY OF THE LEARNING OUTCOMES

Criterion 1. Assessment of the Students Competencies Formation Level

Criterion assessment: *Good*

Main characteristics of the programme

During online visit, a direct assessment of the graduate students' competencies was carried out. There were 10 4th year students who participated in the direct assessment, which is 62.5% of the graduating course.

During the direct assessment experts used measuring materials developed by the university, these materials were recognized as valid. The assessment was supplemented by an oral survey of experts - an interview to verify the data indicated by the educational organization in the self-assessment report

To analyze the development of competencies, the experts selected the following ones:

1. Assessment of general cultural (universal) competencies:
 - 1.1. UC-2 Is able to determine the range of tasks within the set goal and choose the best ways to solve them, based on the current legal norms, available resources and restrictions
2. Assessment of general professional competencies:
 - 2.1. GPC-1 Able to understand the principles of operation of modern information technologies and use them to solve problems of professional activity
3. Assessment of professional competencies (core competencies), including competencies that reflect the requirements of the regional and/or federal labor market, depending on the main consumers of program graduates:
 - 3.1. PAC-3 Able to participate in the preparation, organization and conduct of comprehensive social research in order to identify socially significant problem situations, determine strategies, methods for their study and develop recommendations for their resolution.
 - 3.2. PAC-4 Able to organize social work with clients, taking into account their national-cultural, age, gender and social status and individual psychological characteristics.

In carrying out the procedure of direct assessment of competencies, experts used the following testing and evaluation materials (taking into account the online form of the visit): the predominant form of assessment was conversation and interviewing.

Aspects that were checked:

- general assessment of the education quality of the educational programme;
- whether, based on the point of view of students the main professional tasks are reflected, the best ways to solve them, based on the current legal norms, available resources and restrictions;

	technology in the field of the program.	
2.	The tasks and contents of the GQW are aimed at confirming the competencies formation of the graduate.	100%
3.	The degree of use of the materials collected or received during the pre-graduation practical training and the preparation of term papers in the independent research units of the GQW.	100%
4.	The topic of GQW is defined by the requests of the industry organizations and the tasks of the experimental activity solved by the teachers of EI.	100%
5.	The results of GQW find practical application in the industry.	100%
6.	The degree of use of the results of the R&D of the Chair, faculty and third-party research and production and/or research organizations in the implementation of independent research parts of the GQW.	80%

All topics of GQW correspond to the interests of practice and can certainly be used to improve the efficiency of social services. However, it is difficult to judge from the text of the GQW to what extent it corresponds to the tasks of experimental activity solved by university teachers. Such information is not specified in most works, as well as the use of the results of research works of the department, faculty and third-party research organizations when writing independent research parts of the GQW.

Strengths:

1. Good theoretical training, involvement in interdisciplinary teaching of highly qualified teachers (first of all, sociologists, psychologists, conflictologists), the basics of social analysis and mathematical methods in sociology, social management and planning, etc are studied.

Recommendations:

1. Improve the organization of postgraduate support for students. The monitoring of students' employment is carried out actively, however, supplementing it with procedures (programs) that help in the professional adaptation of graduates will help to retain staff in the workplace. At the same time, this will make it possible to introduce a system of continuous professional education and expand the base of applicants for a master's program "Social Work".

2. Increasing the motivation of students for social activity can help reduce losses in employment after university. The relatively low level of salaries of specialized social work specialists can be compensated by the awareness of the importance of the profession and employment opportunities in various organizations. For this, in the course of the educational process, increased attention can be paid to issues of secondary career guidance, conducting individual support for students and making individual curricula for each of the student. Secondary career guidance can be carried out by conducting events that familiarize students with an expanded range of places of practice and with the profession as a whole. These events can be round tables, field trips or week-long internships for students starting from the second year of study at various places of practice.

3. The possibility of creative application of their knowledge and skills in the workplace prolongs staying of graduates in the same workplace. To this end, postgraduate support of graduates with the participation of employers and the department through the joint development of social projects will not only strengthen the position of graduates, but will also contribute to the formation of motivation and practice-oriented students who are still studying.

Criterion 2. Demand for Programme Graduates on the Labour Market

Criterion assessment: *Good*

Main characteristics of the programme

Analysis of the role and place of the programme

More than 630,000 social workers are employed in the social service system of the Russian Federation, whose services are used by about 26 million people, including 15 million elderly and disabled people. In the general structure of employment of the population, the number of social workers is quite significant. Specialists in this profession are trained by 120 Higher Education Institutions (HEI) of the Russian Federation, including the specialized HEI - the Russian State Social University, as well as by a number of medical and pedagogical universities. The list of honorary titles includes the title "Honored Worker of Social Protection of the Population of the Russian Federation".

At the regional level, the main providers of social services are social institutions of both general and specialized types, which are under the jurisdiction of the Committee on Social Policy of the Administration of St. Petersburg (151 institutions with a total number of specialists of about 30 thousand - according to expert estimates).

Currently, due to the increased social risks associated with economic, epidemiological, military-political conditions, the demand for social work specialists has increased dramatically both at the federal and regional levels. Partially, this need was met by the growth of volunteer movements and civil initiatives, but this is not enough and the main role in the training of highly qualified professionals is still played by specialized educational institutions, in which it is necessary to increase admission to state-funded places for both master's and bachelor's programs.

According to HeadHunter, one of the largest job and employee search sites in the world (according to the Similarweb rating), over the past month (data as of July 2022), 548 vacancies for the position "social work specialist" were announced in St.Petersburg and the Leningrad region, and in general in the Russian Federation - 7,271 vacancies.

Sources:

1. Statistical data of the Administration of St. Petersburg.
2. Report Petrostat .
3. Ucheba.ru website.
4. hh.ru website.

Analysis of the information indicators submitted by the university

A comparative analysis of the employment of graduates of the bachelor's degree in social work in the region and in the country as a whole shows that the above level is quite consistent with reality. The main problem is the relatively low salary. However, the still low level of prestige and social status of the profession should also be noted. The solution to this problem requires the participation of all educational organizations that train personnel in the sphere of "Social work", as well as the state represented by the relevant ministries (Ministry of Labor and Ministry of Education).

In the general context, the activities of the Employment Center can be recognized as corresponding to the goals of the Center and quite satisfactory:

- The percent of students combining education at a university with work in the professional field – 10%, which is quite justified, because. such inclusion in the work process during education process is available to a few students who are able to master programme on their own to a large extent.

- Percent of graduates who have successfully employed within one year after completing the programme – 70% (with the exception of graduates entering the masters degree programme), the rest of the graduates are employed within 1-1.5 years.

- Percent of students working in their professional field in the region – 81%, 7% work in Moscow; 12% work in the field of social work outside the region.

- Percent of programmes graduates to the nationwide percent of graduates in this field– 8% (over the past 3 years, 3 agreements on employers sponsored basis have been concluded - 5 people).

Strengths:

1. The indicators of the demand for graduates in the labor market are consistently monitored, quantitative data are analyzed based on materials from reliable sources (data aggregators on labor markets); which allows to quickly respond to the demands of the labor market, thereby taking into account its needs in the implementation of the programme. In addition, a qualitative analysis is carried out based on the results of an independent study of the opinions of graduates and employers. An assessment of the dynamics of indicators is given and recommendations are developed. These recommendations are later on fulfilled as, for example, the change in curricula and in the content of bachelor programme.

Recommendations:

The most effective tactic can be one in which the statement of facts is complemented by an active labor market policy:

1. search for opportunities to conclude agreements on employer sponsored training of working employees of social service organizations and institutions of citizens social protection;

2. constant contacts with employers to clarify the composition of competencies required for graduates;

3. conducting an independent assessment of the qualifications of graduates at the end of the educational programme;

4. certification of practical skills of graduates through the involvement of regional Qualification Assessment Centers;

5. postgraduate support of graduates in order to increase the level of their professional adaptation, overcome the problems associated with this process, as well as attract graduates from the bachelor degree programme to study in master's programs and in the system of additional professional education;

6. assistance in increasing the attractiveness of the profession "specialist in social work", popularizing the profession, improving its image and social status of specialists.

Certification of graduates will help remove employers' claims to the level of practical preparedness (lack of practical experience) and improving the image of the profession will attract more applicants with higher performance and motivation for social activities.

Criterion 3. Stakeholders' Satisfaction with Learning Outcomes

Criterion assessment: *Excellent*

Main characteristics of the programme

Based on the self-assessment report, the experts conclude that stakeholders are satisfied with the learning outcomes.

Share of employers who believe that the competencies of graduates of the programme:

- are substantially compliant with the professional requirements in the industry – 68%.
- mostly meet modern professional requirements in this industry with minor deficiencies – 24%.
- few graduates whose competencies meet modern requirements for specialists in this industry – 5%.
- do not meet the requirements of the industry – 3%.

Percentage of graduates who are fully satisfied with the learning outcomes – 90%, rather dissatisfied 10%.

Reason for dissatisfaction: lack of practical skills.

Experts confirm the availability of copies of documents with positive feedback from employers.

Strengths:

1. Contacts with employers are constant, stable and active. 84 agreements on cooperation during the organization of the educational process have been concluded.

2. Feedback from employers on the level of readiness of graduates of the bachelor level is quite positive, there is a high theoretical background, high erudition of graduates.

2. There is feedback of employers about the quality of training of specific graduates, indicating high adaptability and career success. Programme graduates trained at St Petersburg University in the field of "Social Work" are in demand by employers - up to 70% of graduates work in the field of study, mainly in St. Petersburg and the Leningrad Region.

Recommendations:

1. To involve in cooperation, in particular for the practice of students, employers from socially oriented non-profit organizations, which have more flexible requirements for the competencies of graduates and more opportunities in organizing student practice.

EDUCATION QUALITY ASSURANCE

Criterion 1. Internal Quality Assurance System

Criterion assessment: *Good*

Main characteristics of the programme:

The functions of education quality monitoring are carried out by the Center for Monitoring the Education Quality, established in September 2020. The Center conducts a systematic and comprehensive collection of information on the quality of education at St Petersburg University. Purpose: to analyze the assessments of all participants in the educational process (students, teachers, administrative staff of St. Petersburg State University and employers) in order to provide them with data on the degree of educational activities success.

The main functions of the Center for Monitoring the Quality of Education at St Petersburg University:

- assessment of the academic disciplines and educational programs quality in terms of educational trajectories of students;
- assessment of the quality of the educational process, its structure and the place of a particular discipline in this process from the point of view of teachers;
- assessment of the knowledge and competencies acquired by graduates and their use in professional activities;
- assessment of the degree of compliance of the competencies and qualifications of graduates with the requirements of the labor market from the point of view of employers;
- assistance to teachers in fulfilling the requirements set by the Department of Educational Programs of St. Petersburg State University and the Study-Methodical Commission in the field "Sociology and Social Work" for the design of disciplines syllabi paragraphs related to the quality of education;
- analysis of the ideas and expectations of applicants from studying at the University;
- analysis of the educational process organization from the point of view of the administration of educational activities.

At the Faculty of Sociology, a Working Group has been established to develop and conduct monitoring of the education quality at St. Petersburg State University, and a commission for monitoring the education quality operates within the structure of the Study-Methodical Commission in the field "Sociology and Social Work".

List of documents regulating the work of the education quality management system: Education quality assurance system - St. Petersburg State University is available at www.spbu.ru.

At the level of an accredited program at the Faculty of Sociology, monitoring of the education quality is carried out by the Commission for Education Quality Control. The Commission audits the disciplines syllabi, modules, practices regarding the content of the evaluation tools, control and measuring materials. Additional body - quality groups established to conduct regular independent assessments of the education quality.

The monitoring results are heard at a meeting of the Study- Methodological Commission (SMC), issues of the education quality are discussed at each meeting of the SMC once a month.

Strategic issues of the development of the educational programme, including the quality of education, are discussed at the Academic Council of the Faculty and the Educational Programme Council once every six months.

The basis of the Faculty of Sociology policy in the field of ensuring the quality of education is the update of educational standards and the procedure for self-assessment of educational programs, etc.:

- systemic interaction of educational programs with employers (when designing the content of the programmes and reviewing them, creating Educational Programs Councils, assessing the quality of the graduate students learning outcomes;
- involvement of employers, students and teaching staff connected with the implementation of educational programs in the internal audit procedure for assessing the quality of education;
- educational and methodological support and organization of selective testing of residual knowledge obtained in the course of training;
- formation of educational programs evaluation tools;
- participation of the teaching staff and management representatives in projects to assess the learning outcomes quality.

Tools for ensuring the education quality used during the implementation of educational programs:

- creation of councils (boards of trustees) of educational programs;
- creation of Commissions for quality control of the educational process;
- rules of study for educational programs, other regulations and local acts of St. Petersburg State University;
- University-wide regular survey of students of all educational programs on the teachers work quality (since April 2015, order No. 1494/1 dated 03/17/2015);
- educational and methodological developments and resource support for educational programs, evaluation tools and technologies;
- Student Faculty Council prepare proposals on the quality of education;
- material and technical support of the educational process;
- distance learning technologies and e-learning;
- staffing of educational programs;
- availability of printed and electronic educational and information resources;
- virtual reception of St. Petersburg State University.

Feedback from students is obtained as a result of interaction with the Student Council, the inclusion of students in the Study-Methodical Commission of the faculty, the commission for education quality control, meetings of the teaching staff with members of the student council. Feedback from the teaching staff is received through the daily work of the members of the SMC.

Students can write complaints about violations in the educational process to the Academic Affairs Department. The Academic Affairs Department organizes an internal check and gives an answer to the applicant on the merits. The Dean of the Sociology Faculty holds weekly meetings with the Student Council of the Sociology Faculty.

Based on the results of the meetings, minutes are drawn up, where are reflected the issues of students concern and the decisions made on them.

Applications from students are also accepted through the SPbU Virtual Reception.

The results of regular monitoring of the education quality are communicated to students through the student council and organized meetings of the SMC members with students, to teachers (through discussion of the monitoring results at a meeting of the departments) and programme teaching staff (through the participation of teaching staff in a meeting of the SMC when discussing monitoring results).

During these meetings, are developed recommendations aimed at overcoming the identified shortcomings and improving the quality of the educational process, is carried out a mutual exchange of views on the use of various methods for the formation of competencies declared by the educational programme, including both learning outcomes (knowledge, skills, mastery of skills) and personal qualities (discipline, responsibility, initiative, etc.), measures are being developed to assist teachers in fulfilling the requirements set by the department of educational programs of St. Petersburg University and SMC in the field “Sociology and Social work” related to the the design of disciplines syllabi paragraphs related to the quality of education and evaluation tools.

The results of the discussion are published as the protocols of the SMC and the Education Quality Control Commission on the SPbSU website.

In 2018, the bachelor's degree program 39.03.02 "Social work" passed the procedure of international accreditation by AKKORK. As a result of the examination, the programme was issued certificates of international accreditation by AKKORK for a period of 4 years:

Certificate dated 01/09/2019 No. A-275/012019:

http://www.akkork.ru/general/upload/projects/spbgu26s_e.pdf;

The data obtained from Reviewers report is used in the work of the Educational Program Council, the administration of the faculty, the Study-Methodological Commission in the respective field of study to improve the quality of education, increase the professionalism of employees and activate reserves. For example, the recommendations received as a result of accreditation.

Experts confirm the availability of documents confirming the compliance of the educational programme quality with the requirements of Russian and international accrediting organizations.

Strengths:

1. The management system has a well-thought-out organizational and administrative structure. Both administrative structures and representatives of the teaching staff, as well as students are involved, which makes it possible to take into account the opinion of various stakeholders in the quality management of the educational programme.

2. The level of involvement of employers in the development, implementation of the programme and the assessment of the learning outcomes is high. Thanks to this, takes place a targeted assessment of the students' learning outcomes by the labor market, and this ensures that students are in demand among employers.

3. Well structured links between all subjects of assessment: teachers, employers. This allows you to comprehensively develop the educational programme.

Recommendations:

1. Expand the tools for informing about the activities of the Department of Theory and Practice of Social Work on the relevant sites. For example, more extensive coverage of research issues, practice-oriented programs and, in particular, socially significant projects on the website of the Sociology Faculty. At the time of accreditation, the information on the website of the Sociology Faculty is mostly devoted to topics in the field of sociology.

2. Strengthen the feedback of the SPbU management system with teachers and students of SPbU. For example, to bring to the attention of teachers and students the need for ongoing activities. Before carrying out any changes, organize the collection of feedback in the form of meetings with students and teachers and take into account the opinion of teachers and students when implementing the planned changes.

3. Avoid the risk of bureaucratization of control. For example, the reduction of various forms of teachers' reporting.

Criterion 2. Educational programme management

Criterion assessment: *Good*

Main characteristics of the programme:

The programme development strategy

The development strategy for the Social Work educational program is part of the St Petersburg University Development Program for 2021–2030.

The main goal of the Social Work educational program development is to achieve a combination of academic and practice-oriented training system.

The academic quality of education is ensured by regularly updating the structure of the educational process based on the results of the research activities of teachers and expanding the participation of students in scientific research, including at the request of employers.

Practice-oriented learning is reflected in the approach of St Petersburg University to the cooperation with employers, in which the educational process and its quality assessment are carried out jointly with the professional community, which allows taking into account the trends in the formation of the student groups when developing the education programme strategy.

The programme management system

The program management system is regulated by the Charter of St. Petersburg State University, the Rules of study for the basic educational programs of bachelor's degree, specialty, master's degree and secondary vocational education at St. Petersburg State University, local regulations. The overall program management system is carried out by the Dean of the Sociology Faculty, chairman of the SMC, scientific director of the program, head of the department. Each

of the participants has well-defined functions. The Educational Program Council creates and updates a strategy for its development for the future.

St Petersburg University uses various tools to involve employers in the analysis, design and implementation of the program. In particular:

1. Participation of employers in meetings of the Educational Program Council;
2. Inclusion of representatives of employers in the state examination commissions to carry out an independent assessment of the graduates learning outcomes;
3. Participation of employers in educational and scientific events of the program (conferences, seminars, master classes).

Website

The website of the Sociology Faculty is available at the link: <https://soc.spbu.ru/> .

Availability of official pages and accounts in social networks:

- <https://vk.com/sociograph/>

Strengths:

1. The professional competencies mentioned in the SPbU educational standard are aligned with the labor functions of the professional standards.
2. Focused legal training in the field of social protection of the population and training in the field of learning foreign languages (in accordance with the recommendations of 2018).
3. New control and measuring procedures have been developed to assess the readiness of students and graduates to perform labor functions stated by the professional standards.
4. All topics of the GQW are agreed with representatives of employers, the topics of the GQW are promptly updated. The formation and approval of the Registry of GQW topics is regulated by the annual order "On the formation of an electronic registry, the selection and approval of topics for graduate qualification works of SPbU students."
5. Students complete GQWs on practice-oriented topics that are proposed by employers.
6. Contracts have been concluded with organizations in the field of social work in order to expand student internships places system.

7. Cooperation with employers is multifaceted and versatile, carried out in the following areas:

– Defining a strategy for the development of educational programs together with the Educational Program Council, consisting of representatives of employers, authoritative experts in the field of social work (according to Order 6 of March 10, 2016 No. 1430/1 "On approval of the Regulations on the Educational Program Council" <https://studylib.ru/doc/2271092/prikaz-N1430-1-ot-03/10/2016---sankt>).

– Inclusion of representatives of employers in the state examination commissions for the independent assessment of the graduates learning outcomes (Orders on approval of the composition of the State Examination Commission for the bachelor's degree program No. 4669/1 dated 04.26.2022 https://edu.spbu.ru/files/2022/20220426_4669_1.pdf). For example: Bambaeva Dorzhima Vladimirovna, social work specialist, St. Petersburg State Budgetary Institution of Social Services for the Population "Center for Social Assistance to Families and Children of the Admiralteisky District of St. Petersburg."

Recommendations:

1. Expand existing models of interaction with organizations - potential employers. For example, involve them in secondary vocational guidance, invite the heads of employer organizations to participate in competitions within the framework of the program, conduct weekly internships for students starting from the second year of study and weekly internships for teachers.

2. Continue saturating the educational process with practices on the basis of a specially created unit - a social clinic.

3. Strengthen attention (for example, through practical exercises, trainings, business games) to the development of competencies (for example, the ability to work with databases, competencies related to interdepartmental communications through electronic communication systems) necessary for the digitalization of the system social protection and social services, strengthen digital and information competences of students.

Criterion 3. Educational Programme Structure and Content, Methods of its Implementation

Criterion assessment: *Excellent*

Main characteristics of the programme:

Compliance with labour market requirements, programme's objectives and consideration of stakeholders' opinions

When forming the content of educational programs, were taken into account the Federal State Educational Standards of Higher Education of bachelor's and master's programs (3++) in social work field and existing professional standards.

The implemented programme meets the demands of the labor market both at the federal level and at the regional level. The latter aspect is realized through direct contacts with representatives of employers in the region.

Compliance with the internal standards of St Petersburg University is managed by the Regulations on the Educational Programs Council and is controlled by collegiate bodies (SMC) and heads of faculty and departments.

Educational programs are created and improved taking into account the opinions and proposals of the Faculty Student Council and students' appeals to the Study-Methodical Commission (members of the Student Council are permanent representatives of students in the Study-Methodical Commission (SMC) of the Sociology Faculty, all their suggestions and comments are recorded by the protocols of the SMC). Students' opinions and suggestions are brought to the attention of teachers at the meetings of SMC, the Department of Theory and Practice of Social Work, the best and effective ones are used to enhance the educational process and develop the initiative and creativity of students.

Curricula

Educational activities are implemented on the basis of competence -oriented curricula (bachelor's degree , master's degree). The form of a competence -oriented curriculum involves an indication of the competencies formed by each discipline. A competency -based curriculum is being reviewed by the Department of Educational Programs, which, in particular, checks for the presence of all competencies from the competency model.

The curriculum in the field of "Social work" for full-time education at the bachelor's level is approved annually by the vice-rector for Academic affairs. Competence -oriented curriculum of the bachelor 's degree program "Social work" (code of the educational program CB.5057 *) .

The undergraduate curriculum makes it possible to form individual educational trajectories through specialized and elective disciplines that correlate with the needs of the labor market and are agreed with employers, as well as internship programs.

In the process of passing various internships, students get the opportunity to specify their interests and abilities in various types of professional activities, which determine their choice in a variety of elective courses and determine the individualization of the learning path. Examples of elective disciplines are “Introduction to the activities of social services”, “Basics of volunteering”, “Activities of social services to enhance the personal potential of clients”, “Social insurance funds activities”. Students have choice in in terms of internship in administrative and managerial work, internship in social rehabilitation, during these students perform individual tasks in accordance with their research interests.

The participation of employers in the formation of curricula consists in their participation in the activities of the Educational Programs Councils on the basis of the Regulations on the Educational Programs Council (Order on approval of the Regulations on the Council No. 1430/1 dated March 10, 2016 https://spbu.ru/sites/default/files/1430_1.pdf); their inclusion in the SMC, the participation of employers' representatives in the review of St Petersburg University educational programs, in particular, for compliance with professional standards and labor market requirements.

Syllabi

All disciplines have a connection between them, which is indicated in the curricula, syllabi are reviewed to avoid repetition of topics. This is reflected on the website: Syllabi are posted at the link: <https://nc.spbu.ru/s/txjHBmsKsxKakRx>.

The modular principle is applied: "Theory of Social Work" (includes The Theory of Social Work and Foreign Models of Social Work), "Psychology of Social Work" (includes "Psychology of Personality", "Psychology of Development" and "Fundamentals of Psychosocial Work"), "Legal support of social work", etc. The formed competencies correspond to the educational programme.

The use of innovative methods and new teaching technologies in syllabi:

1. Use of the equipment of the St. Petersburg State University modern Science Park in the educational process.
2. Availability of up-to-date scientific literature in the disciplines syllabi in the field related library of St. Petersburg State University.
3. Classes are conducted by teachers who are participants of research work and grants. In the course of their classes, modern achievements of science, engineering and technology are used.
4. When conducting classes, modern software products: PowerPoint, Blackboard, Gosoapbox, MS Teams, SPSS systems are used.
5. Topics for research, term papers and GQW are proposed on the basis of ongoing research projects in agreement with employers.

In terms of teaching, innovation is manifested in the use of such forms of training as problem solving workshops, individual consultations, trainings, a case method, a lecture by two lecturers at the same time (dual lectures), a lecture with pre-planned errors, and master classes. Interactive methods are also used: classes using various technologies, including: business, role-playing games; discussions; technology "Brainstorming"; analysis of real situations of professional activity.

Both teachers and students during the survey answered that such forms are used constantly in all subjects.

All disciplines syllabi are agreed with employers, since all study-methodical documentation is examined and approved by the study-methodical commission (which includes representatives of employers). Representatives of the Student Council are involved in this work. Each discipline is aimed at the formation of competence (in whole or in part). This is confirmed in the curriculum.

Evaluation tools

Evaluation tools used in the current and interim monitoring of progress meet modern requirements. The sources of formation (questions, tasks, situations, etc.) and content (materials developed on the basis of real practical situations) of the evaluation tools correspond in terms of complexity, the amount of hours allocated to the study of the discipline, the declared competencies, professional standards.

Evaluation tools of the educational program consists of evaluation tools for disciplines (modules), internships. In general, these are: case tasks, scenarios of business games, practice reports, questions for a seminar, colloquium, round table topics, discussions, disputes and debates, a list of topics for group and (or) individual projects, topics for essays, reports, abstracts, term papers, GQW, choice of tasks for control in class/ self - study work, theoretical, practical, analytical creative tasks, tickets, choice of tasks for pass-fail tests and exams.

Evaluation tools on the final (state final) attestations

These evaluation tools include:

- a list of learning outcomes indicating the stages of their formation in the process of mastering the educational program, as well as indicators of competencies;
- description of indicators and criteria for assessing learning outcomes at various stages of their formation, description of assessment scales.

Database of evaluation tools

Methodological materials that define the procedures for evaluating learning outcomes after studying disciplines (modules), passing internships, as well as the results of mastering the educational program are developed in accordance with the requirements of the St. Petersburg State University educational standard, the experience of implementing the programmes accumulated at the department.

Practices and final state examination

In carrying out the interim and final examination, the developed evaluation tools and control and measuring materials are used. Interim examination is carried out using interactive forms of measurements, cases, tasks agreed with employers.

Internship syllabi developed and agreed with employers are used, including pre-diploma internship, in which tasks are aimed at developing practical skills specified in the competency model.

The questions of the Final State Examination and the topics of the GQW, term papers are correlated with the profile of the programme, are regularly updated;

Indicators of the declared learning outcomes have been developed, all tasks and questions of the Final State Examination, topics of GQW, term papers are available to all interested parties.

Strengths:

1. The opinion of stakeholders is taken into account when forming the structure, content and methods of implementing the educational programme, which are determined by the Regulations on the Educational Programs Council, which unites all stakeholders, including teachers, employers, students, administration representatives.

2. All disciplines syllabi are coordinated with employers, since all study-methodical documentation undergoes a review and is approved by the Study-Methodical Commission, which includes representatives of employers.

3. All disciplines have a connection between them, that is indicated in the curricula, disciplines syllabi are subjected to review.

4. Undergraduate curricula make it possible to form individual educational trajectories through specialized and elective disciplines that correlate with the needs of the labor market and are agreed with employers.

5. The use of innovative methods and new teaching technologies in syllabi: business and role-playing games; discussions; technology "Brainstorming"; analysis of real situations (case study).

6. Having its own standard for training professionals in social work, St Petersburg University includes in the programme in the field of "Social work" a number of flexible elective courses that reflect both the strategy for the development of the social sphere and operational tactical tasks, reflect the problems of a rapidly changing social environment, the tasks of the state's social policy in different levels.

7. Many hours are devoted to students' internship (the total volume of all types of internship is 936 hours, including 252 hours of work place internship). Are being formed competences that are in demand on the labor market and are highly appreciated by employers.

Recommendations:

1. To assess the formation of the competencies identified in the programme, it can be recommended to expand the tasks of a practical orientation. For example, to give more interactive tasks in the form of case studies.

2. Expand the use of interactive methods for assessing student competencies, adding such as project methods, project defense, group assignments in the form of case studies.

3. In the content of academic disciplines, expand topics related to the digitalization of the social sphere and the formation of digital competencies.

4. Participation of students of the program in various competitions and contests to identify active and well-prepared students, to increase the motivation for professional training. For example, the All-Russian Olympiad "I am a professional", the Olympiad in social work "VSO". Also holding intrafaculty competitions and olympiads.

5. Saturation of internship syllabi with meaningful educational and real work activities focused on the development of practical competencies. It is recommended that students be more actively involved in the activities of the Social Clinic, the development of social project activities at the request of employers.

6. Development of new more effective evaluation tools and new control and measuring procedures for assessing the formation of universal, general professional and professional competencies of students.

7. Involve employers in the implementation of students' leisure, educational and preventive projects in social service organizations. For example, digital skills activities for older people.

8. Invite various employers (not connected to the programme at the position of teachers with real life professional experience in the field of the programme) to conduct practice-oriented classes (trainings, business and role-playing games, other forms of gamification of the

educational process, including VR technologies, to form a set of cases - solving situational problems, to develop social projects (microprojects) at the request of employers). Increasing the practical orientation of the educational process will increase the readiness of students for future professional activities, enhance creativity in the organization of training, and as a result, increase student satisfaction.

Additional information

Structure, content and methods of implementation of the educational program are determined by the Regulations on the Educational Programs Council (Order on approval of the Regulations on the SOP of higher education No. 1430/1 dated March 10, 2016 https://spbu.ru/sites/default/files/1430_1.pdf) . It is brought in line with the standard of St. Petersburg State University, as well as with the Federal State Educational Standard 3 ++ in the field of "Social Work", with the professional standard "Specialist in Social Work".

Criterion 4. Participation of Employers in the Educational Programme Realization

Criterion assessment: *Excellent*

Main characteristics of the programme:

Employers' involvement

Employers take an active part in the development, updating and implementation of the educational programme. Cooperation with employers is regulated by the documentation on the SPbU Educational Program Council.

Interaction with employers is carried out through:

- obligatory inclusion of representatives of employers in the Study-methodical commission (see website);
- participation of employers in the activities of Educational Programs Councils;
- formation of the State Examination Board with the participation of employers representatives (at least 50% of the State Examination Board members are representatives of employers);
- participation of the employers representatives in the assessment of SPbU educational programs, in particular, for compliance with professional standards and labor market requirements;
- participation of employers in the formation of topics for scientific research, topics of term papers and graduate qualification works of students, as well as in their assessment for compliance with labor market requirements;
- involvement of representatives of the professional community in the management of work practice, reviewing research projects and graduate qualification works of students.

Of great importance is the survey of employers, aimed at identifying the competencies necessary for graduates.

Among the wishes of employers for the preparation of graduates are the following:

- The ability to see and formulate social problems, which opens up new possibilities for solving problems that economists, managers, and psychologists do not discover.
- Ability to compile and conduct qualitative and quantitative research, predict topics that will be relevant in 5 years.

- A graduate of St Petersburg University must know the federal and regional regulatory legal acts in the field, know the system of organizing social work at the level of state authorities, at the level of institutions, and their typology. To have an idea about the specifics of the organization of social services for the population in social institutions of various types and a number of other issues. Skills should be close to the professional standard for positions that are in the field of social work.

- Be able to establish contact with citizens, their social environment, diagnose the causes of social ill-being.

- To know possible ways of solving the social problems of a citizen, to be able to plan work with him to get him out of a difficult life situation.

- Possess the skills of persuasion, motivate recipients of social services to actively participate in activities regarding getting out of a difficult life situation.

Employers are involved in the process of updating programs and teaching on the program; during the site visit and verification of documents, syllabi compiled with the participation of employers, evaluation tools and control and measuring materials were presented.

Representatives of employers included in the educational process are involved in interactive forms of classes: business games, workshops, discussions. With their participation, new technologies and teaching methods are being developed.

Representatives of employers are members of the following commissions and councils: the Study-Methodical Commission (President of the Nevsky Angel Charitable Foundation, V.A. Lukyanov, social work specialist of the Center for Social Assistance to Families and Children, Bambaeva D.V., etc.), a member of the Educational Programs Council in the field of "Social Work" (see the Order on the composition of the Council), a member of the State examination commission (Deputy Chairman of the Committee on Social Policy of the Administration of St. Petersburg , director of the St. Petersburg State Home - boarding school for children with disabilities and disabled since childhood with mental disabilities No. 1; director of the St. Petersburg State Budgetary Institution "City Information and Methodological Center" Family ", etc. See Orders on the composition of the State examination commission).

Reviewers confirm the availability of documents copies on the involvement of employers in the process of updating programs and teaching on the program.

Interaction with employers

Employers regularly take part in meetings of academic councils and departments, state examination commissions, practices.

Syllabi and evaluation tools have been agreed with employers; 100% of the professional disciplines syllabi of bachelor programme are developed with the participation of employers, for example: syllabi of educational practices, the implementation of which is carried out on the basis of social organizations of the city. The list of partner organizations where the practices of students is carried out is located on the website of the social clinic of St. Petersburg State University.

On-the-job trainings are held on the basis of social organizations of the city with the necessary equipment for the provision of social services to the population.

Graduates' employment and GQWs

- in the 2021–2022 academic year, employers influenced 100% of the bachelor's theses topics;

- in the 2021–22 academic year, at least 10% of students and teachers took part in projects together with employers, including representatives of large organizations.

Documentary evidence of the participation of employers

Experts confirm the availability of documents on the participation of employers, including representatives of large organizations, partners of the educational program, in the development and updating of the educational program, taking into account the prospects for the development of the labor market, significant for the relevant area of professional activity, including: declared learning outcomes, evaluation tools, curriculum, syllabi, practice syllabi , topics of graduate qualification works.

Strengths:

1. Employers are included in all levels and all forms of the educational process.
2. The participation of employers is active, they influence the content of the educational process, the assessment of the graduates' competencies formation level.
3. Some of the students' works are not only practice-oriented, but also intended for implementation.
4. Employers participate in the resource support of the educational process (for example, conducting excursions to specialized organizations) and internship bases.

Recommendations:

1. The active involvement of employers in the educational process involves the implementation of various types of educational work. This is a strong point, it should be developed. But expansion is possible due to the partial inclusion of students in the practical activities of social service organizations, in particular in the implementation of social projects on the request of employers, both in terms of the development and implementation of these projects.
2. To more actively include representatives of socially oriented non commercial organizations into organization of the internships, as they have more flexible requirements for organizing student internships. Also it will be good to implement jointly with these organizations practical projects developed by students and teachers of St Petersburg University.
3. Expand the involvement of employers in the resource support of the educational process, for example, by concluding contracts for conducting 2 or more days study tours for bachelor programme students.

Criterion 5. Participation of Students in the Educational Programme Design and its Implementation

Criterion assessment: *Excellent*

Main characteristics of the programme:

Students influence the educational process through the participation of representatives of the student council in the study-methodical commission, the Academic Council of the faculty, the Academic Council of St. Petersburg State University, through student applications submitted through a virtual reception; students' opinions are also regularly monitored using surveys of SPbU students. Open meetings of students with the Dean of the Sociology Faculty are held monthly, where current problems of the educational process and the quality of the studies organization are discussed. The Center for Monitoring the Quality of Education at St Petersburg University conducts student surveys every semester. Students are actively involved in scientific activities (according to the results of the survey, 90.9% were satisfied with the work with the supervisor).

Interaction with teaching staff and participation of students in the educational process

Interaction is built both during the educational process and in extracurricular activities through public student organizations;

Polls are conducted among students to find out their opinion on the actualization of teaching aids;

Surveys of students during conversations with experts showed that their activity is quite high and the feedback is quite active.

Collecting feedback

Feedback is collected in different ways: monitoring by the Center for Monitoring the Quality of Education of St Petersburg University, direct contact with the dean of the faculty, the mechanism for collecting complaints and suggestions in an anonymous mode, as well as through the mechanisms of public student organizations (Student Council , etc.)

Compliance with students' expectations

Based on the results of the interview with students during the online visit, reviewers confirm the data that the programme both in terms of content and structure is in compliance with students expectations.

Strengths:

1. Feedback from students is built on a systematic basis and well organized.
2. Students are included in all mechanisms for managing the quality of education.
3. Systematically conducted student surveys make it possible to constantly monitor student satisfaction with the quality of the educational process, as well as their new requests.
4. Students are included both in the education quality management and in the research and public activities of the university.

Recommendations:

1. With the systematic involvement of students in all areas of university life, attention should be paid to the involvement of the widest possible range of students. An oral interview

showed that the activity of students in the direction of "Social work" is somewhat less than that of sociology students.

2. Practical experience shows that various types of competitive activities of students, both scientific and applied, have good motivational opportunities. It is possible both to use the available resources (the All-Russian Student Olympiad "I am a Professional" in the competence "Social Work" or the All-Russian Student Olympiad in the direction "Social Work") and to create own formats of competition in the region.

Criterion 6. Teaching staff

Criterion assessment: *Excellent*

Main characteristics of the programme:

The teaching staff of the Social Work Theory and Practice Department is highly qualified: the proportion of teachers implementing specialized disciplines and having work experience corresponding to the profile of the educational program over the past 3 years is 80%. The proportion of the correspondence of the teachers basic education to the profile of the disciplines taught is 100%. Teachers are actively involved in research activities, in interactions with employers, and they do a lot of work with students.

Teaching staff

– full-time and part-time teachers with an academic degree: have a Ph.D. degree in their specialty – 45%; have an academic degree of Doctor of Science in their specialty – 36%; are academicians/corresponding members of the Russian Academy of Education, the Russian Academy of Sciences, etc. - 4%; have a PhD degree and other degrees obtained abroad - 3%.

– the proportion of teachers implementing specialized disciplines and having work experience corresponding to the profile of the educational program over the past 3 years is 80%. The proportion of the correspondence of the basic education of teachers to the profile of the disciplines taught 100%;

– the share of teachers who have successfully passed the procedure of independent qualification assessment (including international qualification assessment) and have the appropriate certificate of qualification as confirmation of the assessment of their professional competence within the profile of taught disciplines is 98%.

Research work

Research with internal funding is conducted on a competitive basis: information about competitions is posted in the public domain on the St Petersburg University portal. The main criteria and requirements are: interdisciplinarity of research, publication of research results in leading scientific publications (indexed by the Web of Science Core Collection or Scopus). Applications for conducting research at the expense of external funding are submitted to the Vice-Rector for Research or to the SPbU Center of Expertise.

Over the past 3 years, scientific and teaching staff participating in the implementation of programs in the direction of "Social Work" have received funding under grants: Russian Science Foundation (RSF), Russian Foundation for Basic Research (RFBR), Presidential grants, grants from the Government of St. Petersburg .

The results of the research work are used in the activities of Complex Centers for Citizens Social Services, rehabilitation centers, specialized Committees of the Administration of St. Petersburg.

Developed by the teachers of the department (Kelasiev V., Pervova I.), the methodology for activating the positive image of the family among the younger generation is used by social workers, social teachers working with youth and adolescents in various fields (Complex Centers for Citizens Social Services of 18 districts of St. Petersburg, adolescent centers, secondary schools and etc.).

Methods for working with the elderly population (focus on active old age - Kelasyev V., Grigorieva I.), HIV-infected children, migrants (Borodkina O., Grigoryeva I.) and other vulnerable groups of the population are used by social services under the Committee for Social Policy of St. Petersburg, and the Russian Federation as a whole.

The proportion of teachers participating in the scientific activities of students included in the compulsory program (in the role of supervisor of term papers, graduate qualification works) is 100%.

More than 50% of undergraduate students participate in all-Russian and international conferences. During the assessment procedure, concrete examples of the participation of teachers and students in scientific events, data on publications, grants and awards of teachers and students were obtained.

The sources of funding for R&D of teaching staff are internal grants and grants from all-Russian and international scientific organizations.

Strengths:

1. St Petersburg University is a research hub of global importance, which operates in dozens of research centers and laboratories.
2. Teachers are involved both in intra-university research and in regional and federal research conducted on a competitive basis.
3. Separately, it should be noted the wide involvement of teaching staff in international research programs on social topics.
4. Students are also very active in research projects.

Recommendations:

1. A very strong research direction of activity can be supplemented by social project activities, and in particular with the involvement of students of the "Social Work" field in the development and implementation of social projects.
2. Indicators of publications in foreign sources and citations in them for the teaching staff need to be updated.

3. Forms of rewarding teachers may shift towards practice-oriented projects for both teachers and students.

4. An increase in the scientific activity effectiveness and its use for practitioners can be facilitated by the mechanism of teachers internships in organizations of population social services.

5. A high level of involvement of both students and teachers in conducting scientific research at various levels. There is a wide range of initiative research centers, including international ones, such as the Russian-German Center for Social Sciences, the Russian-Chinese Center for Comparative Social, Economic and Political Studies, the International Center for Social Sphere Studies, the Institute of Eastern and Western Societies, etc.

Criterion 7. Programme's Material, Technical and Information Resources

Criterion assessment: *Excellent*

Main characteristics of the programme:

Material and technical resources

For the implementation of educational programs, there is all the necessary material and technical base (library, including electronic educational resources, computers, equipment, including sports equipment and inventory, tools, hardware, software and audiovisual means of demonstration and other technical and material equipment), which provides all types of training for practical and research work of students.

Students have access to equipped laboratories and specialized classrooms, computer classes.

All students are provided with individual unlimited access to the resources of electronic library systems and other materials that ensure the implementation of educational programs through electronic information resources.

The accessibility of education for people with disabilities is ensured to the extent that it is permissible by the norms for the operation of historical monuments, because the faculty is located in such a world-class architectural monument as the buildings of the Smolny Monastery.

Informational resources

- information resources, library systems and electronic educational resources of the program are used during programme realization. For instance the Blackboard Service (<https://bb.spbu.ru/>). The electronic system "Delo" is used to support the document flow. According to the data of the electronic systems "Education" (standards, curricula, work programs of disciplines, pedagogical assignments) and "Student" (all information about students), automatic tasks are generated for the formation of courses and recording students in the Blackboard system and the DELO document management system

Blackboard and Microsoft Teams service provides teachers with the opportunity to create syllabi for online learning and conduct online classes.

To create an electronic portfolio of scientific and pedagogical staff and students, the Pure system is used .

All classrooms of the Faculty of Sociology are equipped with multimedia equipment (computer, projector with a screen or LCD panel, webcam, speakers). Two auditoriums (304 and 329) are equipped with additional cameras, LCD touch panels and microphone arrays.

The library constantly updates the composition of this fund as part of the work with the lists of references in the disciplines syllabi.

Strengths:

1. The high level of equipment of the classroom fund, information support of the educational process allows to conduct educational activities at a high level.

2. The personal account of a student at St Petersburg University is an information service that combines all information related to events, results of activities, opportunities (for example, applications for scholarships, etc.).

3. Electronic timetable displaying the start date and duration of events, location of training places and other navigational information.

4. Blackboard SPbU educational process support system, which creates e-learning courses for all taught disciplines within all educational programs. The system later mentions all relevant courses in the portfolio and accounts of relevant students, teachers and assistants in e-learning courses.

Recommendations:

1. It is recommended to use Russian software due to the dangers of using foreign analogues.

Criterion 8. Management of Human Resources, Material, Technical, Information and Financial Resources of the Programme

Criterion assessment: *Excellent*

Main characteristics of the programme:

Stimulation of scientific and teaching activities (material and moral encouragement of achievements, competitions, creation of conditions for creative work, academic mobility). Methods of encouragement based on indicators of publication and project activity of employees are practiced.

Management of Human Resources

In order to implement the systematic development of the personnel reserve, St. Petersburg State University provides a variety of tools to stimulate professional growth and motivation for academic and teaching activities: contests of educational and methodological and research works, special project competitions, support for participation in international conferences, trainings and master classes, professional development in the specialty, exchange of professional experience with colleagues from other universities, including foreign ones, organization of scientific events (conferences, round tables, etc.), regular meetings with the university management.

- active forms of support for young teachers and graduate students, internships for young teachers and scientists, including in leading research centers, stimulation of scientific and project activities;
- involvement of practitioners in teaching;
- a comprehensive assessment of the administrative staff at St. Petersburg State University is carried out by the HR Department, surveys are conducted on the platform <https://fhr.spbu.ru/moodle/> by the feedback method - surveys of the business environment.

The level of qualification of teaching staff and opportunities for professional development

At St. Petersburg State University, there are requirements for the qualifications of teachers involved in the program implementation. The requirements relate to the profile of education, the number of publications, participation in research grants and conferences, etc. Specific requirements for teachers by position are presented in the order.

According to the employment contract, the employee must systematically improve their skills.

The process is regulated by the regulations on advanced training of employees of St. Petersburg State University, Order No. 5655/1 of 16.07.2015.

The system of training / retraining of teaching staff /administrative staff is carried out through the completion of advanced training courses provided by the administration of St. Petersburg State University (teachers are given the opportunity to take advanced training courses at St. Petersburg State University for free) and through private initiatives of teachers. In addition, internal monitoring of the activities of the teaching staff is carried out through reports containing information on the results of the most significant scientific research.

Management of financial resources

Financial support of the Saint Petersburg State University (hereinafter - St. Petersburg State University) is provided at the expense of budget allocations provided in accordance with the laws on the federal budget, funds from income-generating activities within the framework of its types provided for by the Charter in accordance with Article 298 of the Civil Code of the Russian Federation and Article 9.2 of the Federal Law on January 12, 1996 No. 7-FZ "On Non-profit Organizations", income from the trust management of the target capital "Development of St. Petersburg State University" and sponsorship funds received under donation agreements.

Subsidies are regularly provided from the federal budget of St. Petersburg State University for the fulfillment of state tasks (in accordance with the procedure established by the Decree of the Government of the Russian Federation No. 640 of June 26, 2015), subsidies for scholarship provision and major repairs of federal property (in accordance with the procedure established by the order of the Ministry of Education and Science of the Russian Federation No. 446 of May 30, 2012) and funds for the provision of orphans and persons left without parental care.

There are several sources of funding for research, in particular from attracting funding from external funds for scientific research. For example:

The Russian Humanitarian Scientific Fund project "Social competence as a factor of integration of vulnerable population groups into society in modern Russia" (Head – V.N. Kelasyev).

RSF (Russian Science Foundation) project "Challenges of Transformation of the Welfare State in Russia: institutional changes, social investment, digitalization of social services" (Head – O.I. Borodkina).

Projects with external financing of research and development are being implemented, the implementation of competitive projects at the expense of the federal budget (Federal Target Program etc.), grants from Russian and foreign funds.

The volume of current external financing (rubles).

2019 - 51,756,750.

2020 - 58,702,354.

2021 - 81,395,716.

Strengths:

1. The mechanism of a comprehensive assessment of the Teaching staff, how it affects personnel reshuffle decisions.
2. Participation of employers in monitoring the activities of teachers of professional disciplines.
3. Integration of the results of scientific activity into teaching.
4. The procedure for receiving feedback from students and graduates of the program on the work of teachers.

Recommendations:

1. Make adjustments to the indicators for publications in scientometric databases in accordance with the ongoing changes in local regulations.
2. Strengthen incentives for participation in the development and implementation of projects at the request of employers. For example, with the help of individual allowances.
3. To explore the possibilities of teaching internships in social service organizations. This will increase the practice orientation of the disciplines taught and the awareness of teaching staff about the problems and methods of practical activity.

Criterion 9. Student services

Criterion assessment: *excellent*

Main characteristics of the programme:

Student services

St. Petersburg State University has a Department for organizing practices and Promoting Employment of the St. Petersburg State University Educational Department that develops and strengthens St. Petersburg State University's corporate ties with partner organizations, organizes internships, and also offers interesting positions for internships and permanent or temporary

work. Employees of the department inform students about the specifics of organizing an internship in a particular partner company, introduce them to competitive procedures, advise on internship opportunities, and on the requirements for an applicant.

The Department of Theory and Practice of Social Work closely monitors (monitors) the employment of graduates. The average terms of job search are noted, the share of graduates working in the specialty, the average salary is estimated, including taking into account career growth. This indicates the high interest of the department and the management of St. Petersburg State University in the issues of the demand for graduates.

The process includes collecting information from online sources (aggregators of employment data in their region and in the whole of the Russian Federation), extensive contacts with employers, especially in St. Petersburg and the Leningrad region, questionnaires of graduates, surveys of employers.

Targeted learning opportunities are being monitored, although they are very limited at the moment. Of positive importance is the fact that part of students receive an invitation to work after completing an internship and defending the WRC on the materials of such practice. The self-evaluation report indicates a share of 30% of graduates, which is undoubtedly a good indicator.

Student services

- the department of organization of practices and promotion of employment regularly conducts trainings on employment, consultations on the preparation of a resume;
- a system of encouraging students for achievements in extracurricular activities has been developed, including giving thanks, financial incentives, receiving additional points when evaluating student activities and when enrolling in various programs;
- various social initiatives of students were supported, which contribute to the formation of personal and social competencies among students, including in the field of ecology, volunteering;

St. Petersburg State University has more than 10 creative clubs and studios for students on a permanent basis, including: «WHAT? WHERE? WHEN», Chess Club, Volleyball sports Club, Rugby Club "St. Petersburg State University", Martial Arts Club (judo, sambo, boxing), St. Petersburg State University Sports Club "Baltic Eagles" (orienteering, functional all-around, dueling fencing, esports, football (women)), Career Club, English Club, Theater Studio of St. Petersburg State University, St. Petersburg State University Students' Choir, Jazz Vocal Studio, Pop Vocal Studio, Sports Dance Club, Fine Art Studio, etc.

Student life at St. Petersburg State University is diverse and eventful.

In addition to classes, open educational and scientific seminars, conferences and lectures by famous scientists, more than 300 student events are held annually at St. Petersburg State University.

Academic mobility

Students are given the opportunity to complete additional training in the form of internships abroad, language and computer courses, various seminars, trainings, master classes, etc. The Student Mobility Support Program gives you the opportunity to spend one or two

semesters in another country as a student or intern at a foreign university without interrupting your studies at St. Petersburg State University. (for example, in 2021, a bachelor's degree student, Ella Levysheva, was on a one-year internship at the University of Bologna, Italy).

Social and personal development

Various social initiatives of students were supported, which contribute to the formation of personal and social competencies among students, including in the field of ecology, volunteering. Students have opportunities for the realization of creative abilities, including:

- the mechanism of adaptation of first-year students,
- conditions and opportunities for the development of social and personal competencies of students,
- participation in charity and volunteer activities: collect toys for orphanages, conduct performances and master classes for children with cancer, visit veterans of the Great Patriotic War.

St. Petersburg State University has more than 10 creative clubs and studios for students on a permanent basis, there are various creative clubs, studios, circles, including: St. Petersburg State University Studio Theater (<https://vk.com/teatrspbgu>), KVN teams of various faculties of St. Petersburg State University, St. Petersburg State University Choir (<https://vk.com/choirspbgu>) and others.

Equal rights

Ensuring equal educational opportunities for students from various social strata of the population, including students with disabilities and disabilities.

Strengths:

1. Work with students is extensive, systematic, aimed at supporting and developing creative interests and abilities.
2. Student initiatives are supported both in the field of professional development and in social activity.
3. Special attention is paid to the adaptation of first-year students.

Recommendations:

1. A certain group of activists stands out in the self-realization of students, but some students do not take part in them. Involving them in various types of student activity will help both in the professional development and in the personal success of students. For example, by introducing an internal rating of students with various forms of encouragement (gratitude, diploma, and so on).

Criterion 10. Interaction with Applicants

Criterion assessment: *excellent*

Main characteristics of the programme:

At St. Petersburg State University, systematic work is being carried out to attract applicants to all areas of training. The work is addressed to both Russian and foreign applicants.

Attracting Russian applicants

Every year St. Petersburg State University holds such career guidance events as:

- Open door day,
- career guidance lectures in schools;
- online presentations of educational programs.
- Promotional videos in the direction of the educational program "Social Work" for

applicants entering the bachelor's and master's degree programs, a brochure made by students describing the content of the Master's degree level programme "Social Work".

- Bachelor's degree: https://vk.com/soc_abitur?w=wall-22056108_1008
- Master's degree program: https://vk.com/socmagspbu?w=wall-51978785_241

- From January to May 2022, a series of online career guidance events "Informational meetings with foreign applicants of St. Petersburg State University" was held.

Admission of Russian applicants

Winners and prize-winners of the final stage of the All-Russian Olympiad of Schoolchildren, members of the national teams of the Russian Federation who participated in international Olympiads in general education subjects and formed in accordance with the procedure established by the federal executive authority responsible for the development of state policy and regulatory regulation in the field of education, in specialties and (or) areas of training corresponding to the profile of the All-Russian school Olympiads or international Olympiads are accepted for training without entrance tests for 4 years following the year of the corresponding Olympiad.

When applying for the program, the results of the Olympiads of students of I and II levels in social studies, history, Russian, and a foreign language are taken into account. Special rights are granted to the winners and prize-winners of school Olympiads held in accordance with the Procedure for conducting school Olympiads approved by the Ministry of Education and Science of the Russian Federation and included in the List of School Olympiads approved by the Ministry of Education and Science of the Russian Federation for the corresponding academic year, who studied during the period of participation in the Olympiad in the 10th or 11th grade.

Two school Olympiads are held to select talented applicants for the program:

The Olympiad of St. Petersburg State University students in Social Studies is one of the most popular among the subject Olympiads. It is included annually in the List of School Olympiads approved by the Ministry of Science and Higher Education of the Russian Federation. Successful participation in the Olympiad opens the doors for high school students to the leading socio-humanitarian educational programs of St. Petersburg State University and other prestigious universities in Russia. The average USE score of students enrolled in the educational program "Social Work" at the expense of budget allocations in 2021 amounted to 274.71 points.

Strengths:

1. The work on attracting students is aimed at informing applicants about the professions in which training is being conducted, competitive programs for schoolchildren are actively included.

Recommendations:

1. Work with applicants is focused on social professions in general. At the same time, the orientation of "Social work" has its own characteristics as a practice of social transformation of society. This activity can be especially attractive for young people. However, public awareness of the content and significance of the activities of social work specialists is extremely low. For example, the involvement of teachers to participate in career guidance events of the city.
